

## Ship to Shore Operator Cabin

The Ship to Shore (STS) operator cabin is developed for his specific circumstances, i.e. high speeds while the operator is continuously looking downwards in a difficult posture.

The STS operator cabin provides safety, an optimal visibility due to the design of the windows and comfort regarding noise, vibrations and ergonomics, to the operator.

In combination with our Ergoseat this cabin offers the best solution for an optimal working environment, which improves the well being and performance of the operator and the efficiency of the crane.

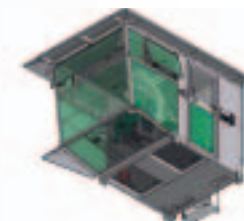

Furthermore, due to the high quality the cabin has a long lifetime with a minimum need of maintenance.

### Specification

- Dimensions: LxWxH = 3400 x 2100 x 2350 mm
- Double skinned, insulated, fully welded outside
- Extended roofline for protection of grease, sun and rain on both sides and at the front
